

Out Front® Technical Rescue Gear

Lighten the load and
get all the protection you need

Finally, a coat and pants set designed for command and support personnel who do not need the expensive and maintenance-intensive protection of full turnout gear.

Dual-certified gear specifically designed for chief officers, safety officers, vehicle extrication, EMS personnel, Fire-Police, pump operators, fire investigators and water supply personnel, and more! Ricochet's Out-Front gear is NFPA certified to provide complete NFPA 1951 technical rescue, extrication and NFPA 1999 blood-borne pathogen protection, as well as limited flash protection needed in non-entry operations.

Built with the same features and quality construction as our top-of-the line Maximum-Mobility® turnout gear, Out-Front® provides the best protection for support operations at about half the price of regular turnout gear. Competitively priced, NFPA certified protection, extremely light-weight and highly breathable -- what is there not to like?

Features

- 6.0 oz/yd² Nomex® outer shell in your choice of colors: tan, navy blue, black, or royal blue
